

QUALITY & STANDARDS PROJECT

Quality & Standards at Saudia Airlines

INSTRUCTOR:

Dr. Deena Eiddah Al-Ghamdi

Introduction

This project focuses on enhancing quality management practices and software development standards at Saudi Arabian Airlines (Saudia), specifically addressing the issue of frequent flight delays. As a leading airline, Saudia is committed to operational efficiency and superior customer experiences. The primary objective is to assess and improve Saudia's project management software systems to align them with international quality standards like ISO and IATA.

Through methodologies such as Fishbone Analysis, the project identifies root causes of delays and develops actionable strategies for improvement. By implementing a comprehensive quality framework, this initiative aims to streamline processes, foster a culture of continuous improvement, and elevate service delivery. Ultimately, our goal is to position Saudia as a high-performing airline that meets the demands of a dynamic aviation market while supporting the Kingdom's Vision 2030 objectives.

Project Objectives

The primary goal of this project is to enhance the quality and efficiency of Saudi Arabian Airlines' (Saudia) software project management systems to reduce frequent flight delays and improve overall operational performance. By assessing existing IT systems and implementing internationally recognized quality standards

Quality in Aviation and Saudi Airlines

Definition of Quality in Aviation:

Quality involves delivering services and products that meet professional standards and fulfil customer expectations.

Attributes of Quality for Saudi Airlines:

- Reliability: Consistent service delivery and punctuality.
- Customer-Centric Approach: Prioritizing passenger needs to enhance satisfaction.
- Market Competitiveness: Emphasizing quality standards builds trust and retains customers.

Quality in Aviation and Saudi Airlines

Definition of Standards:

Standards are established guidelines ensuring safety, efficiency, and reliability in aviation operations.

Types of Standards in Aviation:

- Regulatory Standards: Set by authorities (e.g., GACA, ICAO) to ensure compliance with safe operational practices.
- Operational Standards: Ensure effective order management, safety operations, and maintenance to reduce delays.

Key Quality Measures and Indicators

Operational Excellence:

- Punctuality: Percentage of on-time departures and arrivals
- Reliability: Mean Time Between Failures (MTBF)

Security and Compliance

- Data Protection: Number of security breaches in passenger data systems.
- Regulatory Compliance: Number of compliance issues.

Passenger Experience:

- Satisfaction: Post-flight survey results
- Loyalty: Net Promoter Score (NPS)

Customization of Existing Standards

1. ISO 27001 (Information Security Management)

- Implement a comprehensive ISMS, conduct regular risk assessments, and establish clear data policies to ensure security and compliance.

2. IATA Operational Safety Audit (IOSA)

- Adopt IOSA standards, conduct regular audits and training, and standardize processes to ensure optimal safety and reliability.

3. GDPR (General Data Protection Regulation)

- Ensure GDPR compliance by implementing user consent mechanisms and providing clear data privacy policies for passenger control.

4. ISO 9001 (Quality Management)

- Utilize ISO 9001 to enhance service quality, and ensure punctuality, efficient luggage handling, and in-flight services, while improving processes through feedback and audits.

5. WCAG (Web Content Accessibility Guidelines)

- Ensure compliance with web accessibility standards by making digital platforms user-friendly for passengers with disabilities and conducting regular testing and updates.

implementation plan

Action	Activity	Duration
1. Planning and Preparation	1. Requirements analysis and standards customization 2. Documentation of specific requirements 3. Alignment with ISO 9001, IATA, WCAG, and GDPR	4 weeks
2. ISO/IEC 27001 Implementation	1. Develop Information Security Management System (ISMS) 2. Create and enforce data access policies 3. Train staff on compliance	6 weeks
3. Optimization of Flight Scheduling	1. Integration of AI tools for flight scheduling 2. Real-time monitoring and adjustments 3. Use historical data for delay predictions	8 weeks
4. WCAG Compliance Implementation	1. Conduct audits for website and app accessibility 2. Redesign digital interfaces 3. Implement real-time feedback mechanisms	Ongoing
5. GDPR Compliance	1. Implement user consent mechanisms 2. Develop and publish privacy policies 3. Enable tools for user data management	6 weeks
6. Continuous Improvement	1. Define performance metrics (KPIs) 2. Establish feedback systems 3. Conduct regular system reviews	10 weeks

Roles and Responsibilities for the Quality Improvement Project at Saudia

- Project Manager
 - Overall project direction & stakeholder coordination.
 - Ensuring project alignment with business objectives.
- Quality Assurance Specialist
 - Implement quality standards (ISO and IATA).
 - Regular feedback collection from stakeholders.
- Software Developers
 - Collaborate with QA to resolve issues.
 - Develop tools to improve efficiency.
- Flight Operations Coordinator
 - Oversee flight compliance with established standards.
 - Coordinate between flight crew and quality assurance.
- Training Coordinator
 - Conduct training sessions for staff on quality standards.
 - Monitor feedback for continuous improvement.

Monitoring and Evaluation for Saudi Arabian Airlines

Key mechanisms for enhancing efficiency:

- Key Performance Indicators (KPIs) :
Determine performance of processes and systems
- Feedback Collection :
Collecting feedback to improve service quality
- Real-Time Monitoring Tools :
Equip staff with tools for immediate data access
- Quarterly Quality Audits :
Ensure compliance with industry standards
- Continuous Improvement Cycle :
Integrate feedback for ongoing enhancements
